Inspection

Type: ROUTINE INSPECTION

Date: MAR-08-2007

ONE WASHINGTON SQUARE
SAN JOSE, CA 95192 0025**2.33 (b)(2)****ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE.**

“(b) Each research facility shall establish and maintain programs of adequate veterinary care that include (2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and the availability of emergency, weekend, and holiday care.”

During the inspection, several containers of expired medical materials were identified. Expired materials included different sized vacutainer tubes, suturing materials, endotracheal tubes, PRN adapters and milk replacers. The use of expired medical materials on regulated animals is not considered to be an acceptable veterinary practice and does not constitute adequate veterinary care as required by the above regulation of the Animal Welfare Act. Medical materials often have an expiration date beyond which the manufacturer does not guarantee the stability of the item. Expired medical materials may degrade to toxic by-products and result in unpredictable outcomes if used on the animals. A system is needed to ensure that all expired medical materials are identified, labeled, and stored in an area separate from the non-expired medical materials, or properly disposed of on a regular basis.

This report is an amendment to the initial inspection report of March 7, 2007.
