Inspection

Type: ROUTINE INSPECTION

Date: MAY-30-2007

3.126 ( c )

FACILITIES, INDOOR.

(c) Lighting. Indoor housing facilities shall have ample lighting, by natural or artificial means, or both, of good quality, distribution, and duration as appropriate for the species involved. Such lighting shall be uniformly distributed and of sufficient intensity to permit routine inspection and cleaning.

\*\*\*A bank of lights is non-functional in the swine quarantine room. Indoor lighting must be uniformly diffused to facilitate husbandry practices. Correct by: 06 Jun 07.

3.131 ( c )

3.131 ( d )

SANITATION.

(c) Housekeeping. Premises (buildings and grounds) shall be kept clean and in good repair in order to protect the animals from injury and to facilitate the prescribed husbandry practices set forth in this subpart.

\*\*\*There is standing water in feed troughs in 8 pig enclosures. This problem was also noted in 1 unoccupied enclosure. This suggests that water is accumulating in the troughs during hose spraying in the area. Measures must be provided to eliminate the standing water following cleaning. Correct by: 06 Jun 07.

(d) Pest control. A safe and effective program for the control of insects, ectoparasites, and avian and mammalian pests shall be established and maintained.

\*\*\*Live rat activity observed in pig room O in the kennel building. Observation of rats during midday is an indicator of significant rodent infestation.

\*\*\*Ants observed in aisleway of kennel building between Pig rooms O, N, and M. Lines of ants traverse the aisle and are traveling along the wall between rooms O and P.

\*\*\*Excess cobwebs and spiders noted in kennel building swine rooms M, N, and O.

Pest control measures for rodents, ants, and spiders must be employed to maintain sanitary conditions for animals and to minimize risk of disease. Correct by: 06 Jun 07.
