Inspection
Type: ROUTINE INSPECTION
Date: JUL-18-2007

3.75 (e)

HOUSING FACILITIES, GENERAL.

(e) Storage. Supplies of food and bedding must be stored in a manner that protects the supplies from spoilage, contamination, and vermin infestation. The supplies must be stored off the floor and away from the walls, to allow cleaning underneath and around the supplies. Food requiring refrigeration must be stored accordingly, and all food must be stored in a manner that prevents contamination and deterioration of its nutritive value. Only the food and bedding currently being used may be kept in animal areas, and when not in actual use, open food and bedding supplies must be kept in leakproof containers with tightly fitting lids to prevent spoilage and contamination. Substances that are toxic to the nonhuman primates but that are required for normal husbandry practices must not be stored in food storage and preparation areas, but may be stored in cabinets in the animal areas.

***There is a bag of non-human primate food on the counter in the diet prep room that has been opened but is not being kept in a container. The food must be kept in leakproof containers with tightly fitting lids to prevent spoilage and contamination, thereby protecting the health and well-being of the animals. Corrected by end of inspection.

Conducted inspection of BRL facility
Reviewed protocols
Reviewed Facility inspections for Nov. 2006, May, 2007
Reviewed IACUC minutes Sept. 2006 - May 2007 and semi-annual report.
